ABSTRACT:

PROBLEM TO BE SOLVED: To suppress the processing scale from being increased by eliminating the need for a dedicated software and update-processing setting information by the remote control from a terminal such as a computer through a communication channel.

SOLUTION: A PC 10 of a terminal 1 mounts a WWW browser and is provided with a MODEM 11 that makes data communication through a public telephone line L. The facsimile equipment 2 is provided with a MODEM 20, a tone signal detection section 21, a communication I/F section 22, a TCP/IP protocol control section 23, an HTTPD control section 24, a home page management

section 25 and an
equipment information management section 26. With respect
to a request from
the PC 10 of the terminal 1 conducting remote control, the
facsimile equipment
2 conducts the HTTP control by PPP processing connection.
Furthermore, a home
page is managed by the HTTP control and setting information
is expanded into an
HTML form. The home page by this expansion is served in
response to a request
from the terminal by the remote control and the setting
information for
transfer, registration, modification and deletion is
update-processed.
